avoid_blog_page_permalink_collision(array $data, array $postarr): array

Avoids a collision between a site slug and a permalink slug.

Description

In a subdirectory installation this will make sure that a site and a post do not use the same subdirectory by checking for a site with the same name as a new post.

Parameters

$data array required
An array of post data.

$postarr array required
An array of posts. Not currently used.

Return

array The new array of post data after checking for collisions.

Source

wp-admin/includes/ms.php

Expand code   Copy

```
function avoid_blog_page_permalink_collision( $data, $postarr ) {
    if ( is_subdomain_install() ) {
        return $data;
    }
    if ( 'page' !== $data['post_type'] ) {
        return $data;
    }
    if ( ! isset( $data['post_name'] ) || '' === $data['post_name'] ) {
        return $data;
    }
    if ( ! is_main_site() ) {
        return $data;
    }
```
